

Abstract

5

A device in connection with a separator for separation of multiphase fluid, comprising a preferably cylindrical container (1) with an inlet (2), a first outlet (3) for liquid with a higher gravity (for example water), a second outlet (4) for liquid with a lower gravity (for example oil) and a third outlet (5) for gas.

10

A pipe separator (6) is connected to the inlet (2) of the container (1). The pipe separator (6) constitutes a continuation of the supply pipe (7) for the fluid to be separated and extends partially into the container (1).
